

NAME

getgid, getegid – get group identity

LIBRARY

Standard C library (*libc*, *-lc*)

SYNOPSIS

```
#include <unistd.h>
```

```
gid_t getgid(void);  
gid_t getegid(void);
```

DESCRIPTION

getgid() returns the real group ID of the calling process.

getegid() returns the effective group ID of the calling process.

ERRORS

These functions are always successful and never modify *errno*.

VERSIONS

On Alpha, instead of a pair of **getgid()** and **getegid()** system calls, a single **getxgid()** system call is provided, which returns a pair of real and effective GIDs. The glibc **getgid()** and **getegid()** wrapper functions transparently deal with this. See **syscall(2)** for details regarding register mapping.

STANDARDS

POSIX.1-2008.

HISTORY

POSIX.1-2001, 4.3BSD.

The original Linux **getgid()** and **getegid()** system calls supported only 16-bit group IDs. Subsequently, Linux 2.4 added **getgid32()** and **getegid32()**, supporting 32-bit IDs. The glibc **getgid()** and **getegid()** wrapper functions transparently deal with the variations across kernel versions.
