

**NAME**

gettid – get thread identification

**LIBRARY**

Standard C library (*libc*, *-lc*)

**SYNOPSIS**

```
#define _GNU_SOURCE
#include <unistd.h>

pid_t gettid(void);
```

**DESCRIPTION**

**gettid()** returns the caller's thread ID (TID). In a single-threaded process, the thread ID is equal to the process ID (PID, as returned by **getpid(2)**). In a multithreaded process, all threads have the same PID, but each one has a unique TID. For further details, see the discussion of **CLONE\_THREAD** in **clone(2)**.

**RETURN VALUE**

On success, returns the thread ID of the calling thread.

**ERRORS**

This call is always successful.

**STANDARDS**

Linux.

**HISTORY**

Linux 2.4.11, glibc 2.30.

**NOTES**

The thread ID returned by this call is not the same thing as a POSIX thread ID (i.e., the opaque value returned by **pthread\_self(3)**).

In a new thread group created by a **clone(2)** call that does not specify the **CLONE\_THREAD** flag (or, equivalently, a new process created by **fork(2)**), the new process is a thread group leader, and its thread group ID (the value returned by **getpid(2)**) is the same as its thread ID (the value returned by **gettid()**).
