

NAME

inotify_rm_watch – remove an existing watch from an inotify instance

LIBRARY

Standard C library (*libc*, *-lc*)

SYNOPSIS

```
#include <sys/inotify.h>
```

```
int inotify_rm_watch(int fd, int wd);
```

DESCRIPTION

inotify_rm_watch() removes the watch associated with the watch descriptor *wd* from the inotify instance associated with the file descriptor *fd*.

Removing a watch causes an **IN_IGNORED** event to be generated for this watch descriptor. (See **inotify(7)**.)

RETURN VALUE

On success, **inotify_rm_watch()** returns zero. On error, *-1* is returned and *errno* is set to indicate the error.

ERRORS**EBADF**

fd is not a valid file descriptor.

EINVAL

The watch descriptor *wd* is not valid; or *fd* is not an inotify file descriptor.

STANDARDS

Linux.

HISTORY

Linux 2.6.13.
