

NAME

sysinfo – return system information

LIBRARY

Standard C library (*libc*, *-lc*)

SYNOPSIS

```
#include <sys/sysinfo.h>
```

```
int sysinfo(struct sysinfo *info);
```

DESCRIPTION

sysinfo() returns certain statistics on memory and swap usage, as well as the load average.

Until Linux 2.3.16, **sysinfo()** returned information in the following structure:

```
struct sysinfo {
    long uptime;           /* Seconds since boot */
    unsigned long loads[3]; /* 1, 5, and 15 minute load averages */
    unsigned long totalram; /* Total usable main memory size */
    unsigned long freeram;  /* Available memory size */
    unsigned long sharedram; /* Amount of shared memory */
    unsigned long bufferram; /* Memory used by buffers */
    unsigned long totalswap; /* Total swap space size */
    unsigned long freeswap; /* Swap space still available */
    unsigned short procs;   /* Number of current processes */
    char _f[22];           /* Pads structure to 64 bytes */
};
```

In the above structure, the sizes of the memory and swap fields are given in bytes.

Since Linux 2.3.23 (i386) and Linux 2.3.48 (all architectures) the structure is:

```
struct sysinfo {
    long uptime;           /* Seconds since boot */
    unsigned long loads[3]; /* 1, 5, and 15 minute load averages */
    unsigned long totalram; /* Total usable main memory size */
    unsigned long freeram;  /* Available memory size */
    unsigned long sharedram; /* Amount of shared memory */
    unsigned long bufferram; /* Memory used by buffers */
    unsigned long totalswap; /* Total swap space size */
    unsigned long freeswap; /* Swap space still available */
    unsigned short procs;   /* Number of current processes */
    unsigned long totalhigh; /* Total high memory size */
    unsigned long freehigh; /* Available high memory size */
    unsigned int mem_unit;  /* Memory unit size in bytes */
    char _f[20-2*sizeof(long)-sizeof(int)]; /* Padding to 64 bytes */
};
```

In the above structure, sizes of the memory and swap fields are given as multiples of *mem_unit* bytes.

RETURN VALUE

On success, **sysinfo()** returns zero. On error, *-1* is returned, and *errno* is set to indicate the error.

ERRORS**EFAULT**

info is not a valid address.

STANDARDS

Linux.

HISTORY

Linux 0.98.pl6.

NOTES

All of the information provided by this system call is also available via */proc/meminfo* and */proc/loadavg*.
